ROUND FLAT BOTTOM BIN

RFB-44

SIZE: 48" X 44" (without lid)

CU. FT. CAPACITY: 30 cu. ft.
working capacity

GALLON CAPACITY: 225 gallon
working capacity

- * The Round Flat Bottom Bin (RFB-44) was developed to eliminate the high disposal cost and monthly purchase of fiber drums and corrugated containers as well as provide an economical alternative to stainless steel totes.
- * Product handling is streamlined because the RFB-44 can be dumped via a bin dumper and eliminates the handling and discharge of four 55 gallon drums. A vacuum wand is an alternate way to discharge the product.
- * The RFB-44 can either be used with or without a polyethylene liner. Products such as fruit purees, fillings, liquid egg and creams are securely transported to the destination.
- * The RFB-44 is rotationally molded from durable polyethylene, which produces a minimum wall thickness of 1/4". Comparable Remcon bulk bins are still in service after 8 years because of this process. Brittleness and wear points which are common on collapsible plastic containers are not seen in the Round Flat Bottom. The polyethylene meets FDA standards which allow for food contact.
- * The RFB-44 is a one piece unit attached to the pallet with molded in stainless steel T-nuts. This process allows for a flat bottom on the inside and double thick replacement pallet on the bottom of the container. The lids can be gasketed and secured.
- * The RFB-44 is designed to nest in the backhaul and stack two high for the best space utilization.
- * Fork tines and most handling abuses are field repairable using polyethylene welding rod and a hot air gun. The Round Flat Bottom is unmatched in plastic alternatives.
